AND HIGH TECHNOLOGY

Abstract

The manual contains tests for screening and evaluation of plant extracts and isolated compounds for biological activity. Simple, well-tested, in vitro methods employing isolated tissues or in vivo procedures that require simple equipment and facilities are described.

CONTENTS

Preface	iii
Introduction	iv
Chapter 1: Development of New Drugs	1
Chapter 2: Collection and Authentication of Plant Material	12
Chapter 3: Chemical Processing for Biological Evaluation	16
Chapter 4: Acute-Toxicity and Gross Effects	17
Chapter 5: Testing for Central Nervous System Activity	20
Chapter 6: Testing for Cardiovascular Activity	31
Chapter 7: Evaluation for Diuretic Activity	35
Chapter 8: Hepatoprotective Activity	36
Chapter 9: Effect of Plant Extracts in Metabolic Disorders	50
Chapter 10: Effect on Muscle Preparations	52
Chapter 11: Testing of Plant Extracts for Fertility Regulation	57
Chapter 12: Screening Natural Products for Anti-Inflammatory Activity	59
Chapter 13: Effect of Natural Products on the Immune System	63
Chapter 14: Anti-Viral Activity of Natural Products	67
Chapter 15: Antibacterial and Anti-Fungal Activity of Natural Products	69
Chapter 16: Screening of Natural Products on Protozoal Infections	71
Chapter 17: Anti-Helminthic Activity of Natural Products	76
Chapter 18: Elementary Biostatistics	78
Chapter 19: Guidelines for Use and Maintenance of Laboratory Animals	92
